

DOMUS AURA

ENTRANCE PANEL

Technology for those
who prefer be spoke, classic style.

For our customers who prefer classic, traditional style but who don't want to forego the advantages offered by today's technology, we have just the solution. Classic, bespoke style and elegance is certainly not out-of-date. For our most demanding customers, Urmet offers the Domus Aura entrance panel, a project providing elegant, classic features together with latest generation

video door phone technology. A first glance will tell you that the classic lines perfectly match the use of the high-tech "super mirror" finish of the face-plate. But Domus Aura also offers unique features making it strong and robust including tamper-resistant screws and resistance to weather corrosion. Domus Aura is the classic interpretation of today's most advanced technology.

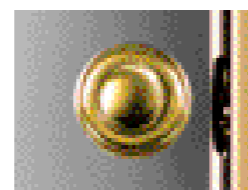

Brass and steel together. The benchmark of sophistication.

The secret of Domus Aura's appeal is its exclusive mix of technology and traditional style that gives rise to a product with stylish and functional features combined with properties of robustness and security. Domus Aura is also characterised by outstanding attention to details, an effective blending of technology and tradition, as reflected in the **keys and name cards**: with their **PVD-treated brass**, they shine like jewels while the **led type backlighting** of the name cards radiates a warm, sophisticated atmosphere. Domus Aura is available for all door phone and video door phone applications whether of the "4+n" or "1+1", coax or 5 wire, and digital type. With the advantage, in both cases, of trouble-free **retrofitting in existing systems using the parts** (outside door speaker unit and TV camera) **of the entrance panel to be replaced**, without having to modify the connections or replace the embedding box. Furthermore, in video door phone systems, the TV camera of the entrance panel can be adjusted both vertically and horizontally.

Brass button.

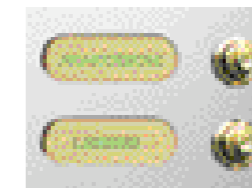

Tamper-resistant screw.

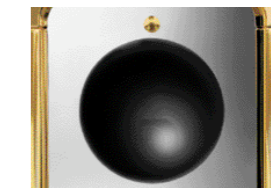

Multiplying Style options.

Domus Aura is an entrance panel that can multiply the style options it offers and can be adapted to accommodate numerous push-button combinations. Also because, in addition to offering a wide range of choice, from **1 to 20 keys**, Urmet provides the possibility of customised configurations. An extra service in addition to **exclusive name-card customisation**.

Back-lit customisable brass name card.

TV camera antiglare protection glass.
